

PATIFLOR POT

Patiflor is a **wheel-shaped pot** with a single incision. They have several uses: they can serve as **a loose standing planters**, act as a specific flower **'sound barriers'** on busy streets or be used to **perform the retaining walls**. The rough structure perfectly fits backyard gardens and urban green spaces.

APPLICATION

The design elements of green architecture (flower beds), strengthening slopes and retaining walls.

USEFUL RECOMMENDATIONS

Installation in accordance with the construction practice, in the case of strengthening embankments, successive layers are to be shifted half the width. In the case of the construction of a retaining wall with a the height above 1 m it should be only used as the lost formwork for footing the reinforcement inside and filled with concrete. Concrete quality and amount of reinforcement, and the footing bench must be specified in the technical design.

SPECIAL FEATURES

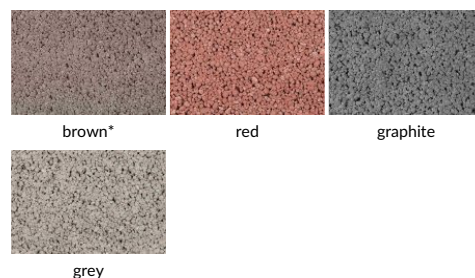

A wheel-shaped pot with a single incision. The shape allows almost any composition of Mini Patiflors with a precise fit for each other. There is no bottom. ATTENTION: For technological reasons pallet's weight may change.
