

# HOLLOW WALL BLOCKS STRUCTUR

These are **split face blocks** for the construction of fence walls and bases. Available in **two sizes and 4 colours**, they allow the design of masonry elements of various heights, widths and aesthetic features.

Thanks to the **splitting technology**, the fence wall blocks are characterised by **irregular surface and structure reminiscent of natural stone**. As a result, they perfectly match the greenery and architecture, as well as gardens in **modern and more traditional styles**.

They can be used together with the hollow blocks for fence posts not only to enclose plots, but also to build dwarf walls or decorative flower beds. Combined with other products of the **SPLIT series** – palisades and steps – they are a highly creative material for the design of impressive decorations around the house.

## USAGE

Construction of a fence wall with split face of any height.

## USEFUL RECOMMENDATIONS

Assemble the fence on the proper continuous footing. Perform the preliminary "dry" assembly. Moisten before filling with concrete. Assemble with sealing adhesive. Pour with concrete 1-3 layers at a time. Regularly remove impurities during the assembly.

## SPECIAL FEATURES

Two sides of the hollow block are split. Available in two sizes. Consists of two elements. To be used with the hollow post block of the fence system.

\* NOTE: due to technological reasons, the weight of the pallet is subject to change.

## DANE TECHNICZNE

Pallet weight (kg)	22cmx38cm: 860kg*; 38cmx38cm: 740kg*
Number of pieces per pallet	22cmx38cm: 40 pcs; 38cmx38cm: 24 pcs.
Number of layers per pallet	4
