

FLAT CAP STRUCTUR

The flat cap with split face is a finishing element of fence walls, bases and posts, which serves as a decoration and protection of fence structures against the snow, rain or frost. Its smooth surface allows the free drainage of water, whereas the split face ensures the visual compatibility with the split face elements of the fence wall.

The cap is available in two sizes: 43 x 43 cm (split on 4 sides), 27 x 50 cm (split on 2 sides), 27cmx43cm (split on 4 sides), 43cmx50cm (split on 2 sides). The colour palette and dimensions of the caps match the split face wall and post blocks.

USAGE

For finishing and protection of the fence walls and posts against the adverse atmospheric conditions.

USEFUL RECOMMENDATIONS

Assemble on frost-proof adhesive. Seal with silicone. Assemble after 2 days from filling the fence posts and walls with concrete. Recommended impregnation with an agent against the accumulation of impurities and moss growth, e.g. Akemi Anti-Fleck.

SPECIAL FEATURES

Available in two sizes. To be used with the hollow post and wall blocks of the fence system. Without drips.

* NOTE: due to technological reasons, the weight of the pallet is subject to change.

DANE TECHNICZNE

Pallet weight (kg)	27x50cm: 625 kg*; 43x43cm: 570kg*
	27x43cm: 535kg*, 43x50cm: 525kg*
Number of pieces per pallet	27x50cm: 30; 43x43cm: 20;
	27x43cm: 30; 43x50cm: 20.
Number of layers per pallet	5
