

DOUBLE-SLOPE CAP STRUCTUR

The **double-slope cap** is an element crowning the fence. It may be used for **finishing fence walls, bases or posts**. The cap serves as a decoration and protection: it **secures** structures made of split face hollow blocks against the **adverse atmospheric conditions**. Its ground surface enables the drainage of water.

The cap is available in **two sizes and colours matching** the fence wall and post elements of the collection of split fence systems by Bruk.

USAGE

For finishing and protection of the fence walls and posts against the adverse atmospheric conditions.

USEFUL RECOMMENDATIONS

Assemble on frost-proof adhesive. Seal with silicone. Assemble after 2 days from filling the fence posts and walls with concrete. Recommended impregnation with an agent against the accumulation of impurities and moss growth, e.g. Akemi Anti-Fleck.

SPECIAL FEATURES

Available in two sizes. To be used with the hollow post and wall blocks of the fence system. Comes with drips.

* NOTE: due to technological reasons, the weight of the pallet is subject to change.

DANE TECHNICZNE

Pallet weight (kg)	30cmx24cm: 175 kg; 48cmx24cm: 345 kg
